

## Squash Fungicide Spray Programs 2019

**Bhabesh Dutta**  
**Extension Vegetable Pathologist – University of Georgia**

As with most crops, disease management begins prior to planting the crop to be protected. By using such methods as disease-free seed and transplants, proper rotation, discing and plowing, and use of resistant varieties, growers can minimize the amount of disease that is available to attack their crop. Using many practices takes all the weight off of any one practice and gives growers more disease management options at lower risk. Once plants are in the field, however, fungicide sprays are relied on heavily for effective and economical management of plant diseases. This spray guide is designed to encompass many diseases that attack squash during the growing season(s) in Georgia and is not intended to be followed literally but to give an idea of the chronology of disease pressure in relation to fungicide choice. Each field in each year has different situations that call for different actions.

### Spray Schedule = 7 day

Spring		Fall	
Spray number	Fungicide/disease activity	Spray number	Fungicide/disease activity
1	Chlorothalonil <sup>1</sup> or mancozeb/DOW	1	Orondis (soil app)/PCAP Chlorothalonil or Ariston/DOW
2	Orondis (soil app)/PCAP Chlorothalonil or Ariston/DOW	2	Chlorothalonil <sup>1</sup> or Ariston/DOW
3	Presidio or Revus/PCAP Chlorothalonil or mancozeb/DOW	3	Orondis (soil app) or Presidio or Revus/PCAP Chlorothalonil or Ariston/DOW
4	Orondis (soil app)/PCAP Chlorothalonil or Ariston/DOW Torino or Fontelis/POW	4	Orondis (soil app)/PCAP Chlorothalonil or Ariston/DOW Gatten or Quintec or Torino/POW
5	Gatten or Torino/POW Presidio or Revus/ PCAP Chlorothalonil+(Elumin or Ranman or or Previcur Flex) / DOW	5	Gatten or Proline/POW
6	Quintec or Gatten/POW Orondis (soil app)/ PCAP Chlorothalonil+(Elumin or Ranman or or Previcur Flex) / DOW	6	Torino or Gatten/POW Orondis (soil app)/ PCAP Chlorothalonil+ (Elumin or Ranman or Previcur Flex)/ DOW
7	Gatten or Proline or Quintec /POW Presidio or Revus/ PCAP Chlorothalonil+(Elumin or Ranman or Previcur Flex) / DOW	7	Presidio or Revus/ PCAP + DOW Chlorothalonil or mancozeb+Elumin or Ranman or Previcur Flex/ DOW
8	Presidio or Revus/ PCAP Chlorothalonil or mancozeb+Elumin or Ranman or Previcur Flex / DOW	8	Gatten or Quintec or Torino/POW  Presidio or Revus/ PCAP Chlorothalonil+ (Elumin or Ranman or Previcur Flex)/ DOW

<sup>1</sup>Chlorothalonil (Bravo, Echo, Equus, etc...).

Always read the label for detailed application instructions or consult the Georgia Pest Control Handbook.

Disease Acronyms: GSM = gummy stem blight; RHIZ=Rhizoctonia belly rot;  
DOW = downy mildew; ANTH = anthracnose; PCAP = Phytophthora crown and fruit rot.

## Cantaloupe Fungicide Spray Programs 2019

**Bhabesh Dutta**  
**Extension Vegetable Pathologist – University of Georgia**

As with most crops, disease management begins prior to planting the crop to be protected. By using such methods as disease-free seed and transplants, proper rotation, disking and plowing, and use of resistant varieties, growers can minimize the amount of disease that is available to attack their crop. Using many practices takes all the weight off of any one practice and gives growers more disease management options at lower risk. Once plants are in the field, however, fungicide sprays are relied on heavily for effective and economical management of plant diseases. This spray guide is designed to encompass many diseases that attack cantaloupe during the growing season(s) in Georgia.

**Spray Schedule = Start 1 week after transplanting, then use 7 day schedule if raining once a week.**

Spri		Fall

		6	Chlorothalonil + Proline/GSB + POW Presidio, Revus / PCAP; Ranman or Previcur flex, or Curzate/DOW
		7.	

<sup>1</sup> Copper is used prior to fruit set at lowest labeled rate if bacterial fruit blotch is an issue.

<sup>2</sup> Proline should be used at 5.7 fl oz when sprayed each time.

<sup>3</sup> Be mindful of preharvest intervals (PHIs) for later sprays as many may have a 7-14 day PHI.

Disease Acronyms: BFB = bacterial fruit blotch; GSB = gummy stem blight; POW = powdery mildew; DOW = downy mildew; ANTH = anthracnose; PCAP = Phytophthora crown and fruit rot.

Always read the label for detailed application instructions or consult the Georgia Pest Control Handbook.

## Succulent Legume (snap, lima, pole bean) Fungicide Spray Programs 2019

**Bhabesh Dutta**  
**Extension Vegetable Pathologist – University of Georgia**

As with most crops, disease management begins prior to planting the crop to be protected. By using such methods as disease-free seed and transplants, proper rotation, discing and plowing, and use of resistant varieties, growers can minimize the amount of disease that is available to attack their crop. Using many practices takes all the weight off of any practice and gives growers more disease management options at lower risk. Once plants are in the fields, however, fungicide sprays are relied on heavily for effective and economical management of plant diseases. This spray guide is designed to encompass many disease that attack succulent pod legumes during the growing season(s).

14.	copper fungicide/BS
15.	copper fungicide/BS
<b>and so on until harvest or pre-harvest interval.....</b>	

Chlorothalonil (Bravo, Echo, Equus, etc.). Always read the label for detailed application instructions or consult the Georgia Pest Control handbook. Disease Acronyms: BS = bacterial spot; ANTH = anthracnose; PCAP = Phytophthora crown rot.

## Collard, Kale, Mustard, Turnip (greens) Fungicide Spray Programs 2019

**Bhabesh Dutta**  
**Extension Vegetable Pathologist – University of Georgia**

As with most crops, disease management begins prior to planting the crop to be protected. By using such methods as disease-free seed and transplants, proper rotation, discing and plowing, and use of resistant varieties, growers can minimize the amount of disease that is available to attack their crop. Using many practices takes all the weight off of any one practice and gives growers more disease management options at lower risk. Once plants are in the field, however, fungicide sprays are relied on heavily for effective and economical management of plant diseases. This spray guide is designed to encompass many diseases that attack greens during the growing season(s) in Georgia.

### Spray Schedule = 7 day

<b>Fall or Winter/Spring</b>	
Spray No.	Fungicide(s)/disease activity
Pre-plant	Besides deep-turning, use Terraclor/RHIZ + CR or Quadris/RHIZ
1.	ProPhyt or KPHITE or Forum or Revus <sup>2</sup> or Reason <sup>3</sup> /DOW; copper fungicide <sup>1</sup> /BR; Cabrio/ALT + CERC
2.	Prophyt or KPHITE or Forum or Revus or Reason/DOW; copper fungicide/BR; Tebuconazole/ALT + CERC
3.	Zampro or KPHITE or Forum or Revus or Reason/DOW copper fungicide/BR; Fontelis or Endura/ALT + SCR
4.	Prophyt or KPHITE or Forum or Revus or Reason/DOW; copper fungicide/BR Switch/ALT + CERC
5.	Prophyt or KPHITE or Forum or Revus or Reason /DOW; copper fungicide/BR; Fontelis or Endura/ALT + SCR
6.	Prophyt or KPHITE or Forum or Revus or Reason/DOW copper fungicide/BR Switch/ALT + CERC

<sup>1</sup> Copper is used to suppress spread of black rot caused by the bacterium *Xanthomonas campestris* pv. *campestris*.

<sup>2</sup> Forum and Revus have the same mode of action, so don't spray them back-to-back. Use one or the other.

<sup>3</sup> If Reason is used you don't need to use Quadris or Cabrio as all three control Alternaria and Cercospora. Don't spray Reason, Cabrio or Quadris back-to-back as they have the same mode of action.

Always read the label for detailed application instructions or consult the Georgia Pest Control Handbook.

Disease Acronyms: DOW = downy mildew; ALT = Alternaria leaf spot; CERC = Cercospora leaf spot; BR = black rot; SCR = Sclerotinia (raisin head); CR = club root.

## Broccoli/Cabbage Fungicide Spray Programs 2019

**Bhabesh Dutta**  
**Extension Vegetable Pathologist – University of Georgia**

As with most crops, disease management begins prior to planting the crop to be protected. By using such methods as disease-free seed and transplants, proper rotation, disking and plowing, and use of resistant varieties, growers can minimize the amount of disease that is available to attack their crop. Using many practices takes all the weight off of any one practice and gives growers more disease management options at lower risk. Once plants are in the field, however, fungicide sprays are relied on heavily for effective and economical management of plant diseases. This spray guide is designed to encompass many diseases that attack these brassicas during the growing season(s) in Georgia.

### Spray Schedule = 7 day

Fall or Winter/Spring	
Spray No.	Fungicide(s)/disease activity
Pre-plant	Besides deep-turning, use Terraclor/RHIZ + CR or Quadris/RHIZ
1.	Chlorothalonil <sup>1</sup> /DOW copper fungicide <sup>2</sup> /BR
2.	Prophyt or Ridomil Gold Bravo <sup>3</sup> or Forum or Revus <sup>4</sup> or Reason <sup>5</sup> or Presidio + chlorothalonil/DOW; copper fungicide/BR; Cabrio/ALT + CERC
3.	Prophyt or Ridomil Gold Bravo or Forum or Revus or Reason or Presidio + chlorothalonil/DOW; copper fungicide/BR; Switch/ALT + CERC; Fontelis/SCR
4.	Ridomil Gold Bravo or Forum or Revus or Reason or Presidio + chlorothalonil/DOW; copper fungicide/BR; Endura/ALT + SCR
5.	Prophyt or Ridomil Gold Bravo or Forum or Revus or Reason or Presidio + chlorothalonil/DOW; copper fungicide/BR; Switch/ALT + CERC + SCR <u>or</u>
6.	Ridomil Gold Bravo or Forum or Revus or Reason or Presidio + chlorothalonil/DOW; copper fungicide/BR; Fontelis or Endura/ALT + SCR

<sup>1</sup> Chlorothalonil (Bravo, Echo, Equus, etc. ...).

<sup>2</sup> Copper is used to suppress spread of black rot caused by the bacterium *Xanthomonas campestris* pv. *campestris*.

<sup>3</sup> Ridomil Gold Bravo and/or Presidio need to be rotated with Forum, Revus, and/or Reason.

<sup>4</sup> Forum and Revus have the same mode of action, so don't spray them back-to-back. Use one or the other.

<sup>5</sup> If Reason is used you don't need to use Quadris or Cabrio as all three control *Alternaria* and *Cercospora*. Don't spray Reason, Cabrio or Quadris back-to-back as they have the same mode of action.

Always read the label for detailed application instructions or consult the Georgia Pest Control Handbook.

Disease Acronyms: DOW = downy mildew; ALT = *Alternaria* leaf spot; CERC = *Cercospora* leaf spot; BR = black rot; SCR = *Sclerotinia* (raisin head); CR = club root.

## Onion Fungicide Spray Programs 2018-19

**Bhabesh Dutta**  
**Extension Vegetable Pathologist – University of Georgia**

The effective management of onion diseases begins prior to planting. By using integrated methods such as disease-free seed and transplants, proper crop rotation, disking and deep ploughing of plant debris, and use of resistant varieties, growers can minimize the amount of disease epidemic by either reducing the amount of initial inoculum or the rate of disease development. Integrated use of management practices reduces the weight on individual management option and provides growers disease management options at lower risk. Chemical management using fungicides should be the last resort after using the other management options. Most of the fungicides are effective when used as protectants, only handful of fungicides have curative actions.

### Spray Schedule = 7 day

Spray No.	<sup>1</sup> Fungicide(s)/target disease
Two weeks after transplanting	Overhead drench application of Fontelis/RHIZ, WM, PR + Copper fungicide (foliar pathogens)
1	<sup>2</sup> Chlorothalonil/BNR, BLB, PB/ BLB, PB
2	Pristine or Merivon or Fontelis/BLB, BNR, SLB, PB

16	Scala or Luna tranquility or Inspire super or Omega 500 or Quadris top or Switch/BLB, BNR, SLB, PB (Omega 500 and Scala do not have SLB activity)
----	---

The fungicide spray for **downy mildew (DM)** will be based on a forecasting model. Alerts for the DM spray will be communicated by the Vidalia Onion and Vegetable Research Center and the UGA, Tifton. **Fungicides with some degree of efficacy on DM are: Reason, Zampro, Orondis Opti and Omega 500.**

<sup>1</sup>Please use the labeled rate of recommended fungicide. Rotate fungicides for good disease control.

<sup>2</sup>Chlorothalonil (Bravo, Echo, Equus etc)

Disease acronyms: BNR=Botrytis neck rot; BLB=Botrytis leaf blight; PB=Purple blotch; RHIZ=Rhizoctonia root rot; WM=White mold; PR=Pink root; SLB=Stemphylium leaf blight;

## Watermelon Fungicide Spray Programs 2019

**Bhabesh Dutta**  
**Extension Vegetable Pathologist – University of Georgia**

As with most crops, disease management begins prior to planting the crop to be protected. By using such methods as disease-free seed and transplants, proper rotation, discing and plowing, and use of resistant varieties, growers can minimize the amount of disease that is available to attack their crop. Using many practices takes all the weight off of any one practice and gives growers more disease management options at lower risk. Once plants are in the field, however, fungicide sprays are relied on heavily for effective and economical management of plant diseases. This spray guide is designed to encompass many diseases that attack watermelon during the growing season(s) in Georgia.

**Spray Schedule = Start 1 week after transplanting, then use 7 day schedule if raining once a week.**

Spring		Fall	
Spray No.	Fungicide(s)/disease activity	Spray No.	Fungicide(s)/disease activity
0.	Proline at-plant drench/FW	1.	Chlorothalonil <sup>1</sup> /GSB Actigard and/or copper fungicide <sup>2</sup> /BFB
1.	Chlorothalonil <sup>1</sup> /GSB Actigard and/or copper fungicide <sup>2</sup> /BFB	2.	Chlorothalonil/GSB copper fungicide/BFB
2.	Chlorothalonil/GSB  copper fungicide/BFB Proline/FW	3.	Chlorothalonil + (Miravis Prime or Aprovia top or Inspire Super)/GSB Actigard and/or copper fungicide/BFB
3.	Chlorothalonil/GSB Actigard and/or copper fungicide/BFB	4.	Chlorothalonil/GSB copper fungicide/BFB
4.	Luna Experience/GSB copper fungicide/BFB	5.	Chlorothalonil + (Miravis Prime or Aprovia top or Inspire Super)/GSB copper fungicide/BFB
5.	Inspire Super or Aprovia top or Miravis Prime/GSB Copper fungicide/BFB	6.	Luna Experience/POW + GSB Orondis Ultra or Presidio or Revus/DOW or PCAP Copper fungicide/BFB
6.	Luna Experience/POW + GSB Orondis Ultra (foliar) or Presidio or Revus/DOW or PCAP Copper fungicide/BFB	7.	Miravis Prime or Aprovia top or Inspire Super /GSB Quintec or Torino + Quadris or Cabrio/POW+ANTH Presidio, Revus or Zampro/DOW or PCAP copper fungicide/BFB
7. 8 <sup>3</sup> .	Orondis (foliar) or Presidio or Revus/PCAP Ranman or Elumin or Previcur flex/DOW	9 <sup>3</sup>	Proline OR Aprovia Top OR Inspire Super/GSB Quintec or Torino + Quadris or Cabrio/POW+ANTH Presidio or Revus/DOW or PCAP
9.	Proline OR Aprovia Top OR Inspire Super/GSB Quintec or Torino + Quadris or Cabrio/POW+ANTH		

<sup>1</sup> Chlorothalonil (Bravo, Echo, Equus, etc...) may cause rind burn if sprayed within 21 day of harvest.

<sup>2</sup> Actigard and/or Copper is used prior to fruit set if bacterial fruit blotch is an issue.

<sup>3</sup> Be mindful of preharvest intervals (PHIs) for later sprays as many may have a 7-14 day PHI.

Always read the label for detailed application instructions or consult the Georgia Pest Control Handbook.

Disease Acronyms: BFB = bacterial fruit blotch; GSB = gummy stem blight; POW = powdery mildew; DOW = downy mildew; ANTH = anthracnose; PCAP = Phytophthora crown and fruit rot. FW=Fusarium wilt.
