

# C A R R O T S

## WHEN TO HARVEST

1

Carrots are ready to harvest when their tops are at least 1 inch in diameter.

2

The very tops of the carrots will likely start to pop out of the soil & their orange color will be vibrant.

3

Baby carrots will be ready to harvest earlier than mature carrots.

## HOW TO HARVEST

1

Loosen the soil surrounding the carrot top with a garden fork before pulling the carrot out of the ground.

2

Grab the foliage of the carrot close to the base and gently pull the entire carrot out of the ground.

## STORAGE

Cut off the carrot tops and store them in cold, moist conditions. Carrots' expected self life is eight months.
