

Grape Spray Program Design Workshops

Disease and insect control are critical components of an IPM program for grapes. Vineyard managers ask questions yearly relative how to set up and administer an efficacious program for management of diseases and insects. In this workshop, vineyard managers will be given the skills and confidence needed to develop efficacious spray programs that incorporate resistance management. At the end of this training, vineyard managers will be confident in the requirements for an excellent spray program, as well as how to develop one. This training will include an overview of major pathogens and insects and critical times for management. Producers will work in small groups with experts to develop spray programs for grape that will incorporate disease and insect control products that will provide effective control while incorporating resistance management.

Agenda:

- 9:30 Registration
- 10:00 Disease management considerations for developing a spray program
- 10:30 Insect management considerations for spray program development
- 11:00 Group work
- 12:00 Lunch
- 12:30 Group work
- 2:00 Group presentations
- 3:00 Wrap up and final questions with experts

Workshop dates, registration contacts and locations are below (maximum of 20 participants per location, so sign up early to ensure a spot):

Paula Burke at 770-836-8546 or pjburke@uga.edu

March 3, 2020

UGA Extension Carroll County Office
900 Newnan Road, Carrollton, GA
(lunch provided on site)

Clark McAllister and Nathan Eason at 706-265-2442 or clarkmac@uga.edu

March 5, 2020

Lumpkin County Parks and Recreation Building
365 Riley Rd, Dahlonega, GA
(lunch provided on site)

Ashley Hoppers at 706-632-3061 or 706-645-4426 or aahoppers@uga.edu

March 17, 2020

Cartecay Vineyards
5704 Clear Creek Rd, Ellijay GA
(lunch provided on site)
