

Maintain healthy landscapes, save water, save time and save money with waterSmart's tips:

Know how much water your plants really need.

Put the “right” plants in the “right” places.

- **Use drought tolerant plants and turfgrasses**
- **Group plants together based on their water needs**

Maintain and improve soil health.

Mulch!

- **Mulching holds moisture in the soil**

Collect water from alternative sources.

- **Rain barrels**
- **A/C condensate**

Know the rules.

- **Contact your local water utility to find out about outdoor water use restrictions in your area**
