

## 2023 Peanut/Field Corn/Soybean Weed Control Recommendations

Eric P. Prostko – Professor/Extension Weed Specialist

Dept. Crop & Soil Sciences

### Five Important Things to Consider:

- 1) Start clean using a combination of tillage, cover crops, and/or herbicides.
- 2) Use narrow rows ( $\leq 30"$ ) or twin rows when practical.
- 3) Use multiple residual herbicides in the system.
- 4) Make timely postemergence applications (tallest weeds  $\leq 3"$  tall, ***not the average***).
- 5) Hand-remove weed escapes before seed is produced.

Table 1. Herbicide Programs for Peanut.

System	Tillage Method	Timing					
		Preplant Burndown <sup>1</sup>	PPI	PRE	EPOST (~10-20 DAP <sup>2</sup> )	POST (~30-45 DAP)	
non-irrigated (dryland)	strip-till <sup>3</sup>	Glyphosate or Paraquat + 2,4-D		No Rain in 7-10 DAP Paraquat + Prowl	Paraquat + Storm or Basagran + Dual Magnum or Warrant or Zidua or Anthem Flex or Outlook	<b>ALS Resistance:</b> Cobra or Ultra Blazer + (Dual Magnum or Warrant or Zidua or Anthem Flex or Outlook) + 2,4-DB  <b>No ALS Resistance:</b> Cadre <sup>4</sup> + (Dual Magnum or Warrant or Zidua or Anthem Flex or Outlook) + 2,4-DB  <b>**A 4-way tank-mixture can be used if required (Cadre + Cobra or Ultra Blazer + 2,4-DB + Dual Magnum or Warrant or Zidua or Outlook)</b>	
				Rain in 7-10 DAP Paraquat + Prowl + Valor + Strongarm <sup>4</sup>			
	conventional			Prowl or Sonalan + Strongarm <sup>4</sup>	No PRE if rain is not expected in 7-10 DAP		Paraquat + Storm or Basagran + Dual Magnum or Warrant or Zidua or Anthem Flex or Outlook
					Rain in 7-10 DAP Valor		
irrigated	strip-till <sup>3</sup>	Glyphosate or Paraquat + 2,4-D		Paraquat + Prowl + Valor + Strongarm <sup>4</sup>			
	conventional			Prowl or Sonalan + Valor + Strongarm <sup>4</sup>			

<sup>1</sup>Apply at least 7 days before planting. If there will be a long delay between the burndown application and planting (>10 days), add a residual herbicide (Valor or Dual Magnum or Warrant or Outlook) to the burndown treatment. <sup>2</sup>DAP = days after planting. <sup>3</sup>Annual grass control in strip-tillage systems is often more difficult thus additional applications of a postemergence grass herbicide (i.e. Fusilade, Poast, and Select) will be needed. <sup>4</sup>Before using Cadre and/or Strongarm, rotational crop restrictions must be considered. **\*\*SPECIAL NOTE: Dual Magnum/Warrant/Outlook are in the same herbicide family (chloroacetamide) and have the same mode of action (inhibit very long chain fatty acids). Zidua/Anthem Flex are not in the same herbicide family (isoxazoline) but have the same mode of action. Multiple applications (> 2) of these herbicides in a single year should be avoided to prevent or delay the evolution of resistance. These residual herbicides have no postemergence activity.**

**Table 2. Herbicide Programs for Field Corn.**

Corn Hybrid/System	Preemergence	Early-Postemergence <sup>1</sup> (~17-30 DAP, V3-V5, ~279-411 GDD's <sup>2</sup> )	Layby/ Directed
Conventional	Atrazine <sup>3</sup> or Dual II Magnum or Warrant or Outlook	1) Prowl + Atrazine + Crop Oil or 2) Atrazine + <u>one</u> of the following: Accent Q; Callisto; Capreno; Armezon/Impact/Impact Z; Laudis; Revulin Q; Shieldex; Steadfast Q	Evik
Liberty Link®		1) Liberty + Atrazine + <u>one</u> of the following: Acuron (48 oz/A); Anthem Maxx; Dual Magnum; Outlook; Prowl; Warrant; Zidua	
Roundup Ready®		1) Glyphosate + Atrazine + <u>one</u> of the following: Anthem Maxx; Dual Magnum; Outlook; Prowl; Zidua or 2) Glyphosate + Atrazine + one of the following: Callisto; Capreno; Armezon/Impact/Impact Z; Laudis; Revulin Q; Shieldex; Steadfast Q or 3) Glyphosate + Atrazine or 2,4-D amine or dicamba or 4) Acuron GT or Halex GT + Atrazine or 5) Glyphosate + Acuron (48 oz/A)	

<sup>1</sup>When using Counter (INFR) for insect and nematode control, the following herbicides should **NOT** be applied POST: Accent Q, Acuron GT, Acuron, Callisto, Capreno, Halex GT, Revulin Q, and Steadfast Q. <sup>2</sup>GDD's = growing degree-days from planting (50°/86° F). <sup>3</sup>A maximum of 2.0 to 2.5 lb ai/A of atrazine can be applied in a single year depending upon application methods.
